

Abstract

Slot-machine for collection and distribution of digital data including at least a local mass memory 6 and a local means of hiring of a memory capacity 13 of this mass memory 6. This means of hiring consists of a data reader 11, accessible on an outer side and reading the data of a data support 10, of an intermediate memory 11a, of a means 12 of analysis, comparison, refusal or acceptance of data 10, and of setting of the price of the hiring of memory capacity 13, and a means of payment authorizing the loading in mass memory of the data pending in the intermediate memory 11a.
